

ABSTRACT

The disclosed facsimile apparatus stores data in a memory card through a communication line, and transfers image and other data to other terminal, image processing device, display unit or the like at a high picture quality
5 through the memory card. A data memory unit stores the received data. A memory card input and output unit writes data into the memory card, and reads data from the memory card. The received data is stored in a data memory unit, and data reception information is displayed in a display unit. The user manipulates an input selector to select the data to be stored in the memory card
10 from the data stored in the data memory unit and transfers to the memory card. Moreover, if necessary, the copyright is protected.
